Skills	<ul style="list-style-type: none"> • Java • C++ • C language • Python • MySql • Data Structure • Html and Css
Projects	<ul style="list-style-type: none"> • • Smart Dustbin using Aurdino and GSM module. The Smart Dustbin project aim to create an efficient waste management system by integrating. Arduino microcontroller technology with a GSM module. The project utilize sensors to detect the level of garbage in the dustbin and relay this information to a central server or designated mobile numbers via SMS through the GSM module. • • Sabji Mandi

This project is totally software base. The language used is pure Java and MySQL.

The Sabji Mandi project used for the whole sale market of vegetables where they are sell in the bulk quantities.

This will reduce the broker work between the people.

- **Home automation using Ir sensor remote.**

Home automation using an IR sensor remote involves controlling household devices, like lights and appliances, wirelessly through infrared signals. The IR sensor detects commands from the remote, triggering actions like turning devices on/off. This system enhances convenience and energy efficiency by automating home functions.

Achievement & Awards

- Power BI certificate
- Excels Skills Job simulation
- First position at project submit at Lnct and Tit college
- C and C++ certificate
- Data Analyst certificate
- Chat GPT and AI tools

Language
