Education

Data Analytics
Masai School
September 2024 - February 2025

Bachelor of Business Administration (BBA) in Business Analytics
LNCT University
August 2021 - June 2024

Technical Skills

Python Machine Learning
Data Science Data Analytics
Data Analysis & Visualization
Web Scrapping
Data Structures SQL

Soft Skills

Adaptability
Time Management
Teamwork Problem Solving

Certifications

MSM | MRM Certified
from Masai School
Masai School

Md Shah Alam

Professional Summary

Analytical Data Analyst with expertise in SQL, Python, and R, adept at transforming data into actionable insights. Proficient in leveraging Generative AI and quickly adapting to new technologies. Strong capabilities in data visualization, problem-solving, and cross-functional collaboration to enhance strategic decision-making.

Experience

Abstinent Research & Technologies	Python Developer Intern	September 2023 - December 2023
--	-------------------------	--------------------------------

- Gained proficiency in extracting data from websites using Python libraries such as BeautifulSoup and Scrapy, aiding in accurate data collection.
- Processed raw data by cleaning, normalizing, and preparing it for further analysis, ensuring data integrity for actionable insights.
- Applied machine learning models to analyze and interpret data, providing a strong foundation in data-driven decision-making.

Projects

Crime Data Analysis [Github Repo Link](#)

Python Pandas Seaborn Matplotlib Numpy

- Designed a Power BI dashboard to analyze B2B sales pipeline data, offering real-time dynamic insights.
- Processed and cleaned datasets using Python and Pandas, managing missing values and normalization tasks.
- Integrated dataset into SQL database with established real-time updates, ensuring dynamic reflections of data changes in the dashboard.
- Visualized key sales metrics, effectively utilizing data visualization principles with tools like Power BI.
- Collaborated within a team environment to deliver a comprehensive and actionable sales dashboard.

CRM Sales Dashboard [Github Repo Link](#)

Python Numpy Pandas Matplotlib Seaborn

SQL Power BI

- Designed a Power BI dashboard to visualize B2B sales pipeline data, enhancing stakeholder decision-making.
- Processed and cleaned datasets using Python and Pandas to manage missing values and ensure data quality.
- Integrated datasets into SQL database to establish real-time updates and dynamic insights.
