Major Projects

Parentfinder, NodeJS, VueJS

MARCH 2015

Parentfinder.com is the most comprehensive, hands-on adoption profile service. It gives parents looking to adopt a baby the professional guidance and profile creation services they need while offering adoption organizations a trusted partner.

I work in both front end and back end development. I get the requirements and divide the tasks between the subordinates including me.

We develop the REST APIs with NodeJS and the user interface with VueJS. The database is MongoDB.

Parentfinder Family Badge

This is a plugin which can be added to any web Parentfinder associated agency web page to list out their clients on their website. Thereby agencies can show their waiting adoptive families to their customers.

It was developed in Vuejs and REST APIs were done in NodeJS.

I used to manage and develop the whole product.

Child Management System

Child Management System is another platform where the children to be adopted were managed and listed to the waiting families.

Here the agencies can add/manage the children, add their adoption details and market their profile on web platforms.

We now develop this system in NodeJS and VueJS. I manage back end, front end and the database.

My Adoption Portal, Revamping - NodeJS, VueJS

JUNE 2019

My Adoption Portal is a platform which supports the adopting/birth families, caseworkers, agencies or attorneys for the entire adoption services including profile creation, case studies, training, marketing the profiles, documentations, programs, financial guidelines etc.

We're now working on revamping the project into NodeJS and Vuejs to make it more scalable, reliable and faster.

I work both in front end and back end along with a team of 5 developers.

Child Connect, Revamping - Laravel to NodeJS

NOVEMBER 2016

Child Connect provides a safe, confidential and secure online place to save and share memories. Life books are available online and in print.

This was done in Laravel and currently migrating to NodeJS

The process of revamp is in progress with NodeJS and ReactJS. We 3 developers are working on it.

Farook Collage PG Admission, Laravel, VueJS

2015

The Farook College PG Admission portal provides the candidates to sign up, enter their personal and mark details to get an admission for the autonomous college graduate course.

It includes the support to the students, final processing of the marks to produce the rank list, and admission processes.

Role: Back end development - Laravel

MES College PG Admission, Laravel, VueJS

2015 – 2016

The MES College PG Admission portal provides the candidates to sign up, enter their personal and mark details to get an admission for the autonomous college graduate course.

It includes the support to the students, final processing of the marks to produce the rank list, and admission processes.

Role: Back end development - Laravel, Database Management

School Management System, CodeIgniter

A school management system, which handles students, teachers and admins.

It is helpful for student register, attendance, exam management, marks management, timetable, class managements, divisions, subjects and so on.

Role: Backend and Front end developer, Handle the RDBMS.

Declaration

I hereby declare that the information given above is true to the best of my knowledge.
