Freelance Consultant in Infomagnus.com (GeoStamp), Hyderabad

Client: GeoStamp

Sep 2017 – Nov 2017

Company: InfoMagnus(Infomagnus.com)

Project: GeoStamp -

Team Size: 5

Major responsibilities include,

Geostamp is a SAS product, tracking the vehicle movement in specified geofences of LA port region of registered tenants. Tenants raise requests to pick up an order from port and dispatch to its customer via a vehicle logistics, who subscribe their vehicles to a data provider to accept the movement pings, geo-coordinates for each vehicle. Vehicles could be embedded with GPS instruments, or driver carries a vehicle with Geostamp app downloaded.

Set of background jobs running in Azure in Geostamp, query the data from each provider based on their API format for every 2 mins, received pings are written to buffer table in SQL Azure. These pings are processed by another job to construct a move of a vehicle in a given terminal of pickup and delivery to customer. There are other background jobs which process the after-delivery

PHANI KATAKAM,

CTO/Director/Enterprise Architect (TOGAF Certified)/ Cloud Architect

Cell: 9000599918 email: kphani_prasad@yahoo.com (Hyderabad, India)

XL sheet to match up the dispatch and customer order. Each vehicle company logins to multi-tenant Geostamp azure website for the report of the move duration matched with invoice raised by vehicle companies for the payment.

Apart from C#, .Net general n-tier architecture, Autofac used for dependency, Azure Table Storage and queues used for tracking the active vehicle data processing, Blob storage for email templates, and database as SQL Azure.

Freelance Consultant in Business Central (Shopping cart for MSEs), Hyderabad

Client: VitaminPacks.com

Apr 2017 – Present

Company: Business Central(Businesscentral.in)

Project: Building Angular 4 UI - Survey System

Team Size: 5

Mentoring teams on latest technology and delivery trends, evaluate best practices in technology implementation and processes.

Application Architect in InnRoad India, Hyderabad

Client: InnRoad Customer Group

Mar 2013 – April 2015

Company: InnRoad India(www.innroad.com)

Project: Nextgen - InnRoad

Team Size: 10-20

Description:

Reinnovated asp.net web application (SAS software) as next-generation architecture with SOA, and latest JS frameworks like knockout.

Involved in designing Layers in N-tier applications of InnRoad Hotel software, which has 300 clients+ customer base.. Hands on code for several modules, components WCF, Web API in C#, .Net, SQL Server being the primary stack.

Redesigned application to follow repository pattern, allowing abstraction of data sources, thus use NoSQL database like CouchBase, for better data retrieval to improve the scalability of application.

Senior Consultant -Microsoft Global Services –India(MGSI), Hyderabad

Client: L'OREAL - WW

Oct 2011 – Nov 2012

Company: MGSI

Project: L'OREAL Production Support

Team Size: 10

Description:

Loreal(www.loreal.com) is a B2C ecommerce site which sells cosmetic products. It has sites for all regions (EMEA, US, Asia). Each country and supported languages have localized sites to reach wide range of population.

Generic features of the ecommerce framework would be treated as core framework with incremental versions of features, incorporated by brand-country combination.

Given the combinations, and active regions like EMEA, US an average 20 tickets with different severity levels per day.

Some of the tickets would be of data extract, configuring jobs, configuration changes as L2 support, major number of tickets would be code bugs/feature change as L3 support.

Loreal has several tools to facilitate ease of access to these sites - DeliveryCheck, Webcenter

MGI Support team owns BL, DAL and Databases and SQL agent jobs related bug fixing and feature changes..but not maintainance of these and UI

PHANI KATAKAM,

CTO/Director/Enterprise Architect (TOGAF Certified)/ Cloud Architect

Cell: 9000599918 email: kphani_prasad@yahoo.com (Hyderabad, India)

The coreframework uses heavily ascx controls and standard pagelayouts, which would enable independent development of GUI, as they are dynamic in nature. The UI team would use of template based pagelayout and these server controls, coreengine would transform these htmls to aspx controls which are deployed in website.

My role being support team member involves ticket analysis, L2, L3 fixes. Feature implementation like Facebook integration with Loreal US site, includes estimation, design, develop and unit testing.

JIRA tool used for tickets, also works as knowledge bank for previous ticket scenarios. Team foundation server used for source control, team builds, several versions branching, merging and deployment requests.

Responsibilities:

- Requirement Analysis, Estimations of functional features
- Middle layer code coherent with existing L'Oreal framework
- Manual testing of the fixes
- Thorough Code review for the team
- Performance Analysis of the tool and improve the code guidelines based on learning's
- Advanced debugging of .Net applications
- Enhancing and fixing the tools of Framework
- Azure feasibility study of enhancements
- Mentor, coaching the senior and junior developers of the team
- Advanced technical sessions for the team in emerging technologies

Environment: ASP.Net, AJAX, C# 4.0, WCF, Type Mock, Visual Studio 2010, Team Foundation Server, Microsoft SQL Server 2008, Scrum Tool - JIRA

Technical Architect at MACH-Evenex

Client: Evenex

June 28, 2010 – September 19, 2011

Company: Mach Mobile Solutions

Project: Evenex – Squid

Team Size: 6

Description:

Evenex – is a product, supports electronic data interchange having front end tools to accept an order from the customer and exchange this document through trade integrator engine. I am working with middle layer which maintains the business configuration and tools to facilitate in tracking document status. The middle tier provides WCF services to receive logs from other layers, and crunches the logs into session related and document related.

These tracings are built into UI, for the facility of service desk users being business intranet sites developed by Asp.net, C#

As an individual contributor, developed an external service by Evenex to facilitate customer's capability in terms of document exchange developed in WCF REST style, as per standards of VANs (Value Added Networks)

Responsibilities:

- Requirement Analysis, Estimations of quick sprints
- Design and development of middle layers Business, Data Layers using C#, Linq to Sql

PHANI KATAKAM,

CTO/Director/Enterprise Architect (TOGAF Certified)/ Cloud Architect

Cell: 9000599918 email: kphani_prasad@yahoo.com (Hyderabad, India)

- Unit testing through Type Mock
- Thorough Code review for the team
- Performance Analysis of the tool and improve the code guidelines based on learning's
- Advanced debugging of .Net applications
