Professional Summary

Dynamic and detail-oriented Software Development Engineer in Test with a strong foundation in automation and manual testing. Proficient in API and mobile testing, demonstrating exceptional problem-solving skills and a keen eye for detail. Adept at delivering high-quality software solutions through rigorous testing methodologies.

Projects

Change Password   Github Repo Link

JavaScript   Selenium   VSCode   cucumber

- Developed an automated test script for the Change Password feature using Cypress, emphasizing user workflows on the TutorialsNinja demo site.
- Focused on identifying and documenting algorithmic and logic errors related to user account settings.
- Collaborated with development team to understand features and improve the automation coverage.

Flipkart (Manual Testing)   Github Repo Link

Microsoft Excel

- Developed and executed comprehensive manual test cases for key functionalities such as Login, Logout, Search, Payment, and Add to Cart.
- Documented and reported identified issues with detailed reproduction steps.
- Evaluated product usability and ensured quality standards were met, focusing on Special Offers feature.

Inventory Management System   Github Repo Link

JavaScript   VSCode

- Designed a comprehensive inventory management solution, focusing on stock levels, order management, and reporting functionalities.
- Ensured robustness and scalability by deploying in a Dockerized environment on AWS EC2.
- Collaborated with team to troubleshoot and enhance the system, focusing on performance and logic optimization.
