- **10th**
  G.S.High School , Amalner
  percentage :- 83.60
  Completed in 2017

- **12th Science**
  Pratap College , Amalner
  Completed in 2019

- **Engineering**
  Information Technology
  SSBT College of engineering and technology, jalgaon
  Completed in 2023

About Me

"I'm a Fullstack Developer with a strong technical background in a range of technologies. My expertise spans from front-end development with Angular and TypeScript to back-end development with Java, .NET Core, and .NET Web API. My proficiency extends to SQL database management, and I also have a foundational understanding of Python.

Internship Experience

AlmaPod, Frontend Intern
june 10th-july 28th,2022

Key responsibilities:
- Collaborated with the development team to implement new features and enhancements for the web application.
- Conducted testing and debugging of frontend code to ensure optimal performance and user experience.
- Assisted in optimizing website performance by implementing responsive design principles and improving page load times.
- Contributed to the development of a user-friendly interface, enhancing overall customer satisfaction.
-

Twowaits Technologies
1st feb-28th feb 2022

Key responsibilities:
- Participated in an intensive training program focused on frontend development technologies.
- Acquired proficiency in Angular, TypeScript, HTML, CSS, and JavaScript.
- Collaborated with the development team on real projects, providing support and contributing to project deliverables.
- Developed a responsive web application as part of the program, showcasing the ability to create user-friendly interfaces.

Projects

1. ToDo List Application

- Description: Created a ToDo List application using Angular for the frontend and .NET Core Web API for the backend. The application allows users to create, update, and manage tasks, providing a seamless and user-friendly task management experience.
- Key Achievements:
    - Developed the user interface using Angular, implementing responsive design for various devices.
    - Designed and built the backend RESTful API using .NET Core, enabling smooth communication between the frontend and backend.
    - Implemented features such as task creation, editing, and deletion, along with user authentication for secure task management.

2. Simple E-Commerce Website

- Description: Designed and developed a simple e-commerce website using Angular for the frontend and Firebase for backend services. The website provides users with an intuitive shopping experience, including product browsing, cart management, and secure online payments.
- Key Achievements:
    - Created a responsive and visually appealing frontend using Angular, enhancing the user interface for effective product discovery.
    - Integrated Firebase to manage product data, user authentication, and real-time updates of cart contents.
