Project Details

Project name: An intelligent anti-phishing approach for Fraudulent URL detection using ML.

Project Domain: Machine Learning

Project description:

- • Phishing is a From of Cybercrime where an attackers imitates a real person/Institiude Promoting them as an official person or entity through e-mail or other communication mediums.

- • In this type of cyber-attack, the attacker sends malicious links or attachments through phishing Email that can perform various functions, including capturing the login credentials or account Information of the victim.

- • The phishing problem is broad and no single silver-bullet solution exists to mitigate all the vulnerabilities effectively, thus multiple techniques are often implemented to mitigate specific attacks

- • The aim of the proposed system is detect the maximum number of phishing attacks using Convolution Neural Network.

Personal Details
